

ABSTRACT

This invention relates to a method of treating an immune-mediated disorder having
5 one or more manifestations. The method comprises administering to a patient requiring
such treatment a gold compound and at least one corticosteroid, wherein the at least one
corticosteroid is selected to interact synergistically with the gold compound to exhibit
preferential action towards one of the manifestations of said disorder or to exhibit equal
action towards each manifestation of said disorder. The invention also relates to a
10 pharmaceutical composition suitable for use in the method.
